Disease Risk

Fungicide Programs

	White Mold / Limb Rot / Leaf Spot						Leaf Spot
Programs	All columns represent 14-day intervals with first application at 30-45 days after planting						
DAP (Days after planting)	30	45	60	75	90	105	120
Low - Medium Risk (Option 1)	Leaf Spot Fungicide	EXCALIA 2 fl oz/A + Leaf Spot Fungicide	EXCALIA 2 fl oz/A + Leaf Spot Fungicide	Leaf Spot Fungicide	EXCALIA 2 fl oz/A + Leaf Spot Fungicide	Leaf Spot Fungicide	Leaf Spot Fungicide
Low - Medium Risk (Option 2)	Leaf Spot Fungicide	Leaf Spot Fungicide	EXCALIA 3 fl oz/A + Leaf Spot Fungicide	Leaf Spot Fungicide	EXCALIA 3 fl oz/A + Leaf Spot Fungicide	Leaf Spot Fungicide	Leaf Spot Fungicide
Moderate - High Risk (Option 1)	Leaf Spot Fungicide	EXCALIA 2 fl oz/A + Leaf Spot Fungicide	EXCALIA 3 fl oz/A + Leaf Spot Fungicide	Leaf Spot Fungicide	EXCALIA 3 fl oz/A + Leaf Spot Fungicide	Leaf Spot Fungicide + White Mold Fungicide ²	Leaf Spot Fungicide
Moderate - High Risk (Option 2)	Leaf Spot Fungicide	Leaf Spot Fungicide	EXCALIA 4 fl oz/A + Leaf Spot Fungicide	Leaf Spot Fungicide	EXCALIA 4 fl oz/A + Leaf Spot Fungicide	Leaf Spot Fungicide + White Mold Fungicide ²	Leaf Spot Fungicide
Your Spray Program				v			

For best control of early and late leaf spot, build a program using fungicides appropriate for the level of risk in your fields and always tank mix Excalia with another labeled leaf spot fungicides. Leaf spot fungicides include, but are not limited to: chlorothalonil, tebuconazole, ABSOLUTE® Maxx, Alto®, LUCENTO®, Miravis®, Priaxor® and PROVOST® SILVER. Always read and follow label instructions for Excalia and other fungicides.

¹When early conditions are highly favorable for white mold, make 1st application at 50 DAP & a second application at 80 DAP, adjust leaf spot spray schedule accordingly. ²Under severe white mold conditions, tank-mix a white mold product with the leaf spot fungicide applied at 105 DAP.

Assess Disease Risk in Your Field and Develop a Peanut Rx™

This worksheet will lead you through the four-step process of determining your disease risk level in order to customize a Peanut Rx for your individual field using the reverse side of this worksheet and with the assistance of your Valent representative. For each of the risk index factors, identify which option best describes the situation for your field and add the index value associated with

each choice to obtain your overall disease risk value. This worksheet does not contain all of the varieties included in the 2020 Peanut Rx or the notes that accompany each factor. To view the complete 2020 Peanut Rx, visit the University of Georgia peanut website at ugapeanuts.com.

Step 1: Assess Your Disease Risk

Variety Selection

¹ Adequate research data is not available for all varieties with regards to all diseases, Additional varieties will be included as data to support the assignment of an index value are available.

² High oleic variety

³ Balley has increased resistance to Cylindrocladium black rot (CBR) compared to other varieties commonly planted in Georgia.

*Tifguard, TifhV-HiOL and Georgia 14-N have excellent resistance to the peanut root-knot nematode. *Georgia-12Y appears to have increased risk to Rhizoctonia limb ret and precautions should be taken to protect against this disease.

Step 2: Calculate Your Severity Points

Fill in the following table to calculate your severity points for each of the four major peanut diseases given the 10 determining factors. Total each column to establish your disease index values.

	Spotted Wilt	Leaf Spot	White Mold	Rhizoctonia Limb Rot
Variety				
Planting Date	100000000000000000000000000000000000000	************************		
Plant Population				
At-plant Insecticide				
Row Pattern		Avegar 1 continues y e sa trabajo constata		
Tillage		************		
Classic Herbicide		**************************************		
Crop Rotation		Na - 18 Annie 18 Anni		********
Field History			VI	-
Irrigation				
Your Total Index Value		***************************************		

Step 3: Interpret Your Index Values

Once you've calculated your index values, utilize the following information to interpret your risk level situation.

	Spotted Wilt	Leaf Spot	White Mold	Rhizoctonia Limb Rot
Low Risk	≤ 65	10-35	10-25	TBD
Moderate - High Risk	70-≥ 115	40-100	30-80	TBD

When tomato spotted wilt virus incidence is high statewide or in your region, even fields with a low risk level may experience significant losses. Consider the following recommendations to reduce your spotted wilt risk level:

- Use less susceptible varieties
- · Adjust your planting date
- Consult the complete Peanut Rx for additional options that may also provide limited benefit

Step 4: Develop Your Peanut Rx

Once you have calculated your total risk for each fungal disease, utilize the most conservative fungicide program as your guide for customizing a per-field prescription spray program with the assistance of your Valent representative. Valent-recommended fungicide spray programs for each risk level are included on the reverse side of this worksheet.
